

E3-PDS-I

POLYMER DELIVERY SYSTEM—INLINE

Direct Polymer Delivery

The E3-PDS-I is a complete inline polymer preparation system mounted on an integrated compact stand.

The E3-PDS-I features an open frame polymer activation system with simple automated controls. Robustly designed around standard off the shelf components, this unit secures long term operation and is maintenance friendly.

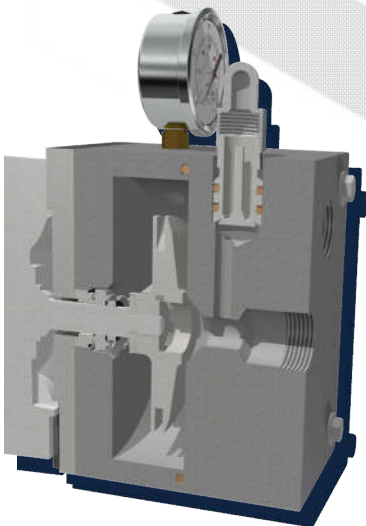

Available with optional post dilution and integrated controls, the inline PDS is a very competitive polymer blending system.

Process Features:

- Automatic Solution Concentration Control
- High Energy Mixing
- Low Energy Mixing

Equipment Features:

- Small Footprint
- No Motor Coupling
- Simplified Controls
- Neat Polymer Pumps Up To 10 GPH
- Solution Flow Up To 1800 GPH

Proven direct drive high energy mixer design and robust injection check valve virtually eliminates fouling
